Rec July 9'

S. I. July 5, 1879

My dear Sir,

Many thanks for your prompt attention to the Opuntia matter. If you desire it, I will send you a whole living plant, so that you may cultivate it from still another locality. I suppose it had best go by express.

I have just written to Prof. Peck, asking for the exact place on the island of Coney that he found Juncus maritimus. If we succeed in re-finding it, I'll send you some specimens. —

Yours respectfully

N. L. Britton, E. M.

New Cambridge Aug 18
Aug ——— 4 P.C

S. I., Aug. 9, 1879.

My dear Sir,

Having received in-
formation from Prof. C. H. Peck
as to the locality on Coney Island
for Juncus maritimus, Lam., I
proceeded there last Saturday
and found what I suppose
to be the plant in question.
I send you some specimens
with this mail which I trust
will reach you safely.
The locality is limited to
~~a locality~~ a patch about 20 ft
square; - at least that is all
I succeeded in finding.
It was in the locality indicated
by Prof. Peck, and I think it must
be the same plant that he sent

you some years ago.

The Torrey Club will be pleased to hear your decision in the matter.

Yours very truly

N. L. Britton, E. M.

School of Mines, Columbia College,

CORNER 49TH STREET & 4TH AVENUE.

New York, Dec. 10th 1879

My dear Sir,

Inclosed please find two imperfect specimens of a Juncus, which I take to be J. setaceus. They were sent to me from Norfolk, Virginia by Mr. H. P. Worcester, of that place. I notice that in Gray's Manual, last edition, the Virginia locality of Juncus setaceus is followed by a (?) If this proves to be the plant, there is no question about its growing there as Mr. W. can testify.

Please let me know what you think of it, and keep the specimens.

Yours respectfully,

N. L. Britton.
